

SERVING STRATEGIC SOLUTIONS

HIPAA Compliant Physician Credentialing App Development

Between September to December of 2019, Datamatix created a HIPAA Compliant Physician Credentialing app for a Healthcare company with 20+ clinics nationwide.

This app exports data to CAQH.org, and ensures the physicians working in the organization, both employees and contractors, are compliant with their certifications and licenses.

Also included in this app is a module for the Credentialing department to create cases for each credentialing task which is assigned to a credentialing worker. The Credentialing Activity Management module has a manager login as well as a credentialing employee login, with the manager/s having permission/s to mark a case as completed.

Several important business rules are captured in this app, provided by a SME (Subject Matter Expert) from the client side.

Besides this app, Datamatix implemented the Office 365 configuration for the Executive Committee and employees with automation of file flow from attachments to various Sharepoint repositories, backup solutions and document workflows.

The app was developed in Angular JS and Azure Cloud stack.
